EXPERIENCE

Full Stack Engineer

SDLC Corp Pvt Ltd

July 2024 – Present

Noida, India

- Engineered high-performance backend modules and transactional ledgers for a production-grade iGaming/crypto platform.
- Architected modular backend services using NestJS with TypeScript, ensuring clean separation of concerns and scalable service design.
- Optimized PostgreSQL schemas using Prisma ORM, ensuring transactional consistency during concurrent operations.
- Orchestrated async pipelines via BullMQ and Redis to handle time-sensitive settlements and background cron.
- Implemented idempotent event processing, distributed locking, and real-time sync via Socket.io.
- Integrated multi-chain Web3 wallets (Solana, EVM, Tron) and containerized services using Docker.

Software Developer

Smartest Software Solutions LLP

June 2023 – June 2024

Noida, India

- Developed and maintained responsive full-stack applications using Node.js, Express.js, React.js, and MongoDB.
- Implemented secure RESTful APIs leveraging JWT-based authentication and role-based access control (RBAC).
- Optimized database performance on PostgreSQL and MongoDB, reducing average response latency by 20%.
- Integrated third-party APIs including payment gateways, SendGrid email services, and AWS S3 storage.

PROJECTS

Chanova – Enterprise iGaming CRM NestJS, Next.js, Postgres, Redis, BullMQ

- Designed an event ingestion pipeline with custom LRU-cached schema validation and Redis SET-NX idempotency.
- Developed an AST Segment Compiler translating visual JSON rule trees into parameterized raw SQL with JSONB casting.
- Engineered a customer journey state machine using BullMQ for delays, md5-based A/B splits, and webhook dispatch.
- Created a visual canvas and condition builder UI in Next.js to configure flow topologies and preview cohort estimations.

Money Tree – iGaming Platform NestJS, Postgres, Redis, Bull, Next.js, Web3

- Built wallet, settlement, and wagering modules with strict transaction safety and idempotent callback handlers.
- Designed optimized transaction ledgers with PostgreSQL row-level locking, ensuring consistency under heavy concurrency.
- Implemented Socket.io WebSocket synchronization for multiplier/crash games, providing low-latency real-time updates.
- Integrated multi-chain blockchain wallets (Solana, EVM) with a responsive Next.js and TanStack Query frontend.

ABOUT ME

Results-driven Full Stack Engineer with 3 years of experience building scalable transactional systems, real-time applications, and backend architectures using NestJS, PostgreSQL, Redis, and Next.js. Experienced in async processing, distributed caching, event-driven workflows, and blockchain integrations.

TECH STACK

Backend & Databases

TypeScript
JavaScript
NestJS
Node.js
Express.js
Prisma
PostgreSQL
MongoDB
Redis
BullMQ
RabbitMQ

Frontend & Real-time

Next.js
React.js
TanStack Query
Tailwind CSS
Socket.io
WebSockets
HTML/CSS

DevOps & Tools

Docker
AWS (S3/EC2)
Git
REST/GraphQL
JWT Auth

EDUCATION

B.Tech in Computer Science

AKTU
